Prepared by the Commodity and Trade Analysis Branch, Commodity Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators are Thomas A. Warden and Mary L. Fant. Shirley E. Brown and Trina J. Duffin provide word processing and table formatting support. Editorial support is furnished by Jim Carlin, Research Information Branch, Information Division, Economics Management Staff. Data processing support is provided by Sharlan Starr and William Meiller, International Economic Systems Branch, Data Services Center.

## **Digest**

**U.S. Agricultural Exports Rise 17 Percent** (see p. 2). The value of U.S. agricultural exports reached \$31 billion during the first 9 months of fiscal year (FY) 1989 (October 1988 through June 1989), a \$4.3-billion increase from the same period a year earlier. Grain exports rose the most, almost \$4 billion, and value climbed for virtually every major commodity outside the oilseeds sector. Exceptions were barley, cotton, nuts, cattle hides, and furskins.

**Imports Account for 10 Percent of U.S. Food Expenditures** (see p. 5). ERS analysts estimate that in 1987 the wholesale value of all food purchased in the United States came to \$232 billion, of which \$24 billion (10 percent) was imported.

**ICO Abandons Export Quotas; Coffee Now Traded on a "Free" Market** (see p. 10). The International Coffee Organization (ICO) voted on July 3 to end the use of coffee export quotas for the remainder of the coffee export year (October-September). Coffee prices fell 31 percent in July, and no new agreement is expected in the near future.

## **U.S. Agricultural Exports Rise 17 Percent**

The value of U.S. agricultural exports reached \$31 billion during the first 9 months of FY 1989 (October 1988 through June 1989), a \$4.3-billion increase from the same period a year earlier. Grain exports rose the most, almost \$4 billion, and value climbed for virtually every major commodity outside the oilseeds sector. Exceptions were barley, cotton, nuts, cattle hides, and furskins.

Barley exports fell as drought cut U.S. production to 6.3 million tons from 11.5 million tons. Saudi Arabia, the largest customer for the crop, shifted its policies to reduce consumption and imports. Cotton exports fell due to reduced U.S. competitiveness during the early part of the year. Although declining competitor supplies and accelerating importer purchases increased the attractiveness of U.S. cotton as the season progressed, year-to-year losses from earlier in the year offset later gains. The value of cattle hide exports declined as weaker demand for global leather goods drove prices down. Furskin exports were off as Canada and most European countries reduced their purchases.

### **Animal Product Exports, at \$4.8 Billion, Are 15 Percent Higher**

Animal product exports rose when a \$650-million increase in meat exports offset a \$137-million decrease in exports of hides and skins. Fresh and frozen beef exports to Japan rose \$269 million and were \$59 million higher to Korea. Both Japan and Korea increased their openness to beef imports following June 1988, raising their imports from all sources. Japan also increased its poultry meat purchases from the United States, as did Hong Kong and the Caribbean. However, the largest portion of the \$88-million poultry meat gain was attributable to Mexico. Mexico's food imports increased significantly during FY 1989 as the government there pursued an inflation reduction program through increased supplies. U.S. exports of animal products to Mexico rose \$440 million, while total U.S.

agricultural exports to Mexico increased by more than \$1 billion to \$2 billion.

Grain and feed exports rose \$3.9 billion during the first 9 months of FY 1989, with corn exports growing more than \$2 billion and wheat exports rising \$1 billion. Grain exports have been buoyed by higher prices in the wake of drought-reduced production and by record Soviet purchases of U.S. corn and sorghum. The average price of U.S. corn exports rose 37 percent from the same 9-month period during FY 1988, while wheat prices increased by 55 percent.

### **Record Soviet Corn Purchases Boost Grain Export Volume**

U.S. exports of unprocessed grains rose as corn exports climbed by 8.4 million tons. Corn exports to the Soviet Union reached 14.7 million tons during October-June, 10.5 million tons more than during the same part of FY 1988. Increased corn exports to the USSR, Eastern Europe, and Mexico offset decreased exports to Peru, the EC, Japan, Malaysia, Taiwan, South Korea, and Algeria.

The volume of wheat exports fell 4.7 million tons. Much of the decline in wheat exports during FY 1989, however, was attributable to reduced Soviet purchases. Through June of FY 1989, exports totaled 4.4 million tons as a larger Soviet harvest reduced import needs. During FY 1988, U.S. wheat exports to the Soviet Union had reached a record 9 million tons, with most shipped by June.

Oilseed exports fared poorly during the first three-quarters of the fiscal year as a drought-reduced U.S. soybean harvest raised world prices, reduced consumption, and opened markets for Southern Hemisphere crops. World trade declined, and the U.S. share of oilseed world trade fell to one of its lowest points ever. U.S. exports of oilseeds and products fell \$499 million to \$5.8 billion. Soybean exports declined 5.7 million tons, a 31-percent drop that offset a 29-percent increase in price. Exports to the EC fell 3.5 million tons to 5.5 million, while exports to East Asia fell more than 700,000 tons. (Stephen MacDonald, Commodity and Trade Analysis Branch)

Table 1--Agricultural, nonagricultural, and total trade balance

Item	October-June		June	
	1987/88	1988/89	1988	1989
<u>Million dollars</u>				
Agricultural exports	26,640	30,982	2,676	3,057

## Imports Account for 10 Percent of U.S. Food Expenditures

The United States imported \$20.5 billion of agricultural commodities (f.o.b. value) in 1987, with \$18.5 billion used for food items. The remaining commodities, such as rubber, silk, wool, cotton, and tobacco, went to non-food use. Another \$5.5 billion was spent on imported seafood, bringing the total imported food supply to \$24 billion. The wholesale value of all food purchased in the United States in 1987 came to \$232 billion, 10 percent of it imported.<sup>1</sup>

The import share of domestic supply varied greatly among commodities. Less than 1 percent of eggs, butter, and lettuce is imported, but imports make up more than 99 percent of coffee, tea, cocoa, and tropical vegetable oils, like palm and coconut. Table 5 gives the import shares for 46 commodities for the years 1970, 1975, 1980, and 1985-87.

### Methodology

Import shares are calculated from supply and utilization balance sheets. Import share is the quantity imported divided by the quantity available for domestic consumption. Exports and ending stocks are excluded so the ratios presented here may slightly overstate the importance of imports in the domestic market. The supply and utilization data for most of the commodities included in this table are contained in *Food Consumption, Prices, and Expenditures, 1966-87*, Statistical Bulletin No. 773, USDA, ERS, January 1989.

Imports of many processed and packaged foods are not accounted for in table 5. Sweetener data, for example, do not include sweeteners contained in such imports as confectionery products, bakery products, edible gelatin, frozen strawberries, canned peas, jams, jellies, preserves, sauces, and soft drinks. Likewise, beef data do not include beef contained in, say, imported lasagna or TV dinners.

## Commodities

### Red Meat

Nearly 9 percent of domestic red meat consumption was imported. However, this figure understates the

true amount because it only considers meat imports and excludes the meat from imported live cattle and hogs. Since red meat consumption comes from imported as well as domestic cattle and hog slaughter, the numerator for the import share is understated. Imports of fresh beef, veal, lamb, and mutton are limited under the Meat Import Law, enacted in 1964. These imports generally reach the quota limit. Pork imports have been unrestricted until recently. However, since 1975 the United States imposed countervailing duties on both fresh pork and live hogs.

### Dairy Products

Less than 2 percent of all dairy products was imported. With 8.7 million milk cows in the United States producing 121.3 billion pounds of milk in 1987, U.S. dairy needs were easily met. U.S. import demand for dairy products meant specialty cheeses and casein, a protein derivative from milk. The United States supported domestic milk production by guaranteeing the price of milk products--butter, cheese, and nonfat dry milk. To minimize Government expenditures, a quota limitation of 242 million pounds is placed on some imported cheeses made from cow milk.

### Vegetable Oils

Since 1985, approximately 18 percent of all vegetable oil consumption in the United States has been imported, compared with 13 percent in the 5 preceding years.<sup>2</sup> Most of the imported oils are tropical oils used for baking. Other imported oils have industrial uses and some, such as olive oil, are used in salads and for cooking.

### Fruits, Nuts, and Vegetables

The value of domestic fruit, nut, and vegetable production at the farm level was \$17.1 billion in 1987.<sup>3</sup> Imports of these commodities, valued at the port of origin, was \$3.6 billion. One of the most widely publicized cases of imports displacing domestic production has been the case of frozen concentrated orange juice (FCOJ) from Brazil. In 1970, just a trace of the domestic FCOJ supply was imported. Since 1970, several freezes in Florida have significantly reduced the U.S. supply of oranges for processing. (Most Florida oranges are processed for juice.) Imports now account for 35-40 percent of domestic FCOJ supply.

<sup>1</sup> Denis Dunham, *Food Cost Review, 1988*, U.S. Department of Agriculture, Economic Research Service, AER-615, July 1989.

<sup>2</sup> This total includes tropical oils as well as cooking and baking oils.

<sup>3</sup> U.S. Department of Agriculture, Economic Research Service, *Agricultural Outlook*, July 1989, p. 54.

Approximately one-fourth of all tree nuts were imported but only 0.1 percent of peanut consumption. A 1.7-million-pound annual quota on peanut imports supplemented domestic production of 3.5-4 billion pounds. One change occurred in 1980, however, when a drought in the Southeast cut U.S. peanut production by 42 percent, causing the Government to lift the quota restriction.

### **Sugar**

Imports accounted for half of domestic sugar consumption in 1970. By 1987, 13 percent (1 million tons) of domestic consumption was imported. The United States had reimposed country-by-country import quotas in 1982 and gradually lowered the quota level each year. In 1981, the year before quotas were im-

posed, sugar imports were 5.1 million short tons. While imports were shrinking, domestic output increased to record levels in the late 1980's.

### **Grains**

Few countries can compete with U.S. grain production. The United States is, by far, the world's largest grain exporter. Yet, one of the fastest growing U.S. import commodities is grain. In particular, oat imports had increased from 16,000 metric tons in 1980 to 511,000 in 1987. Wheat, rice, barley, and rye have had similar increases. Most of these imports came from Canada, a large grain producer, or because of increased demand for specialty grains, such as basmati rice from Thailand. (Stephen R. Milmoie, Commodity Trade and Analysis Branch)

Tea	100.0	100.0	100.0	100.0	100.0	100.0
Cocoa	100.0	100.0	100.0	100.0	100.0	100.0

Note: Imports of many processed and packaged foods are not accounted for in these figures. The sweetener figures, for example, do not include sweeteners contained in such imports as confectionery products, sweetened bakery products, edible gelatin, frozen strawberries, canned peas, jams, jellies, preserves, sweetened sauces, and soft drinks.

Beef figures do not include beef contained in imported lasagna or TV dinners. Alcoholic beverages are not included in the food disappearance (consumption) data although agricultural commodities are used in their production. Distilled spirits, wine, and beer/malt liquor each account for about \$1 billion of U.S. imports.

-- = Less than 0.05.

NA = Not available.

1/ Calculated from supply and utilization balances constructed by the Commodity Economics Division of the Economic Research Service. Import share is the quantity imported divided by the quantity available for domestic food consumption (disappearance). A portion of the imports of some commodities are exported; therefore, the ratios presented here may slightly overstate the importance of imports in domestic consumption for some commodity groups. The supply and utilization data for most of the commodities included in this table are contained in Food Consumption, Prices, and Expenditures, 1966-87, Statistical Bulletin No. 773, Economic Research Service, USDA, January 1989.

2/ Excludes game fish consumption.

3/ Includes cultivated catfish beginning in 1975.

4/ Excludes intermediate products such as mild-cured salmon and salted cod, haddock, hake, pollack, and cusk.

5/ Milk equivalent of all dairy products calculated on a milk fat-solids basis. Excludes cream and bulk condensed milk.

6/ Includes cheddar, Colby, washed curd, stirred curd, and Monterey and Jack.

7/ Olive oil imports.

8/ Includes palm kernel oil, palm oil, and coconut oil.

9/ Includes almonds, filberts, pecans, walnuts, Brazil nuts, pignolias, and miscellaneous tree nuts including pistachios until 1977, chestnuts, cashews, and Macadamias.

10/ Includes apricots, avocados, cherries, cranberries, figs, grapes, nectarines, peaches, pears, pineapples, plums, prunes, strawberries, papayas, and miscellaneous fruits.

11/ Includes apricots, sweet cherries, tart cherries, fruit cocktail, ripe olives, olives in brine, peaches, pears, plums and prunes, and before 1986 berries and cherries in brine. Excludes apples, applesauce, cranberries, pineapple, and citrus sections.

## ICO Abandons Export Quotas; Coffee Now Traded on a "Free" Market

On July 3, 1989, the International Coffee Organization (ICO), unable to resolve major differences among its members, voted to end export quotas for the remainder of the current coffee export year (October 1988-September 1989). There was no indication of how these differences might be resolved. In the weeks following the announcement, the major exporters--Brazil, Colombia, and Mexico--began to aggressively sell their coffee. As a result, coffee prices fell 31 percent during July to 79 cents a pound, the lowest level since July 1975. Both Brazil and Colombia have openly admitted their desire for a free market to gain market share.

### The International Coffee Organization

Forty-two producing countries and twenty-one importing countries signed the International Coffee Agreement (ICA) in 1962 that sought to guarantee income to producers and reasonable prices and a steady supply to importers. Table 6 shows the producer members of the ICO for 1988 and their exports to the United States. Notice that each of the producers is listed under the predominant type of coffee they produce (mild, arabica, and robusta). Each type of coffee has its own distinct taste and quality and commands a premium (or discount) compared with other types of coffee.

The ICO enforced global export quotas during 1963/64-1972/73, 1980/81-1985/86, and 1988/89 through June 30. Quotas are applied in the following manner: each producing country is given a percentage share of the global export market to member countries. Virtually all coffee is traded between member countries. The total amount of coffee to be traded is set by determining the level of world trade that will produce a price of \$1.20 per pound. This export level is set each September just prior to the coffee trade year which begins on October 1. If at any time the ICO indicator price falls below \$1.20 a pound for 10 consecutive working days, the global export quota is reduced by 1.5 million 60-kilogram bags. If the price exceeds \$1.40 per pound, the quota is increased by 1.5 million bags. Only two quota changes may be made per quarter. The ICO

presides over a \$12-billion coffee trade market,<sup>1</sup> which means it has an indirect effect on the land, labor, and capital devoted to coffee production.

### The Issues

The abandonment of quotas by the ICO was not the result of a sudden decision, but was the culmination of several years of disagreement among the larger producers and consumers. The two most significant issues were the sale of coffee to nonmembers, and the availability of the different types of coffee.

Monitoring members is always an important part of any commodity agreement. The ICO verifies stock levels and monitors export sales in member countries. Members were allowed to export small amounts to nonmember countries. Here is where the problem arose. To attract new business, member exporters would offer premium coffee at discount prices to nonmember countries. Some of the nonmembers, however, would then export this coffee to member countries at reduced prices.

The availability issue concerns the mix of the different types of coffee available on the market. The quality of the different coffees varies greatly, and roasters in the importing countries complained that the current system of export quotas did not deal adequately with this problem. Any reduction or increase in export supply, as determined by the export quota system, was done on a country-by-country basis using pre-arranged shares *without any regard for the quality of the coffee*. Under the current free market system, importers are free to purchase the type of coffee they choose. Through the years, producers of unwashed arabicas (primarily Brazil) have lost considerable market share to producers of mild coffee (Colombia, Mexico, El Salvador, and Guatemala).

### The U.S. Position

The United States did not push the ICO into abandoning quotas and is in favor of a new agreement, but only if it meets certain conditions. The U.S. delegation argued that "any new pact must eliminate the practice of some producers selling coffee more cheaply to non-ICO members than to members and allow high-quality coffee in demand to be more readily available." (Stephen R. Milmo, *Commodity Trade Analysis Branch*)

---

# Are we approaching a world food crisis?

That's the question addressed in a new report from the Economic Research Service. The question is raised by a confusing array of facts. Most of the world's good farmland is already in production, nearly all the available irrigation water has been tapped, and groundwater supplies are shrinking. **If world population stabilizes sometime around the end of the next century (as currently projected), the world should have enough nonrenewable resources, such as land, water, and energy, to feed a growing population at a gradually improving standard of living.** But these resources are unevenly distributed, resulting in often prolonged, though localized, shortages. And although world food production per capita continues to increase, it's doing so at a slower rate.

Order your copy of this vital report now. With it you can sort out and put into perspective the recent spate of "no-hope, new-hope" news articles on our world's potential to feed itself.

*Read the recent special issue of World Agriculture, an ERS publication...In a scholarly 75 pages by its own specialists, it tackles such subjects as "Famines Past and Famine's Future" ... "Environmental Degradation of Agriculture" ... "Climate Change and Agriculture" ... "Short-Term World Food Security" ... "Technology: Are We Running Out of Steam?" and more.*

—From *USDA Executive Notes*, Aug. 1989

This report costs \$5.50 domestic and \$7.00 foreign (includes Canada). To order your copy, call toll-free, 1-800-999-6779, and ask for *World Agriculture, SPECIAL ISSUE*, WAS-55. Or send check or money order to ERS-NASS, P.O. Box 1608, Rockville, MD 20849-1608. Your order will be sent by first-class mail.
